

Environmental Turfgrass

Research proves that turfgrass sod offers many benefits to our environment. For instance, sod releases oxygen and cools the air, it controls pollution, reduces soil erosion and purifies and replenishes our water supply. And above all, it provides a natural, comfortable and safe setting for play.

For decades, Manderley has invested in turfgrass research in Canada, the United States and abroad to develop turfgrasses best suited for certain climates and applications.

For conserving water, we recommend Fescue of which we provide two types: Fine Fescue and Tall Fescue.

Fine Fescue

- Excellent drought tolerance, adapts well to dry and non irrigated sites
- Endophyte enhanced insect resistance
- Requires minimal fertilization
- Dense, fine textured turf
- Cold-hardy, ideal for the Canadian climates
- Adapts well to shady areas
- Goes dormant (golden hue) in extreme heat but returns to green colour with cooler temperatures
- Dense, fine textured turf

Manderley's Fine Fescue is a 100% blend of Chewing Fescue, Hard Fescue, Blue Fescue and Strong Fescue.

Tall Fescue

- Excellent heat resistance combined with the ability to root very deeply allows the grass to remain green during dry stretches.
- Endophyte-enhanced insect resistance
- Dense, course textured turf
- Low maintenance
- Good wear resistance
- Best suited for zones 5b and higher

Manderley's Tall Fescue stand is a special mixture of semi-rhizonomous tall fescues.

Application Format & Delivery

Manderley is pleased to offer Fine Fescue in a variety of application formats including:

- Small roll
- Big roll
- Market climate specific blends for maximum performance

Whether your project requires Manderley's Fescue for your home lawn, the city park, a new or existing golf course, or for the home team's pitch, count on us to deliver consistent quality every time!
