Go 'N' Grow delivers a strong start for your new planting, enhancing not only emergence but dramatically improving establishment. Go 'N' Grow improves seedling growth by providing plants small amounts of important nutrients right after germination - before the plant can easily access soil nutrients on its own. Go 'N' Grow improves germination, early plant growth, establishment, and early -season growth, even in challenging growing conditions! Go 'N' Grow has been extensively tested and has demonstrated early plant growth benefits in turfgrasses time and again.

- Go 'N' Grow applied to seed results in:
- » Faster, more even emergence
  - » Larger, more vigorous seedlings
  - » Longer roots, greater root mass
  - » Better ability to cope with early season stress
