Double Time GLS is the first and only Tetraploid Perennial Ryegrass on the market. Because tetraploid leaves have more cell cytoplasm, chloroplasts and cell contents than a standard diploid Ryegrass, Double Time GLS will look better when temperatures, photoperiod and moisture conditions are less than ideal. This TWCA qualified cultivar is also among the best performers on the market for fast germination and early turf quality, making it an ideal choice for overseed projects where rapid results are required. One of the darkest turfgrass cultivars on the market, Double Time GLS is both aesthetically pleasing and strong enough for any sports field. Widely used in professional sport stadiums across North America, Double time GLS roots deeper than any other NTEP tested Perennial Ryegrass, meaning it's tough to tear up and remarkably wear resistant.
